Seeding Square Review: An Essential Tool for the Square Foot Gardener

In this review, I'll explain how the seeding square makes organized planting a cinch!

The Square Foot Gardening method has been my go-to since I began gardening. I love it for many reasons. It allows me to maximize my planting space and close spacing keeps weed growth to a minimum. My favorite aspect, though, is how organized everything looks. I love that each square foot has a purpose. The spacing requirements make it easy to spot weeds and thinning seedlings is a piece of cake.

However, even with a grid it can be tough to accurately

eyeball spacing—especially for crops like carrots and radishes, whose spacing is 16 per square foot. My self-made holes aren't always perfectly aligned, and I often get the planting depth wrong. And when I opt to use the SFG method in beds without grids, I often forget where I've started sowing.

How Does it Work?

The Seeding Square is an attempt to make the Square Foot Gardening method even easier. Sure, a stick works wonders in a pinch, but having perfectly spaced holes really makes a difference.

The gardening tool ships in a square-shaped box. The square itself is slightly raised with a hollow back end to allow for indentations in the soil. As you stamp the square into the earth, it creates a makeshift grid.

The Seeding Square includes a small plastic dibbler with seed depth indicators. On the other side of the wand is a spoon-shaped end for scooping up seeds. The third funnel piece, which clicks to the unit for storage, helps direct seeds into their respective holes.

The Seeding Square itself is full of color-coded holes to help

guide your planting. If you're planting carrot seeds, for instance, you can use the wand to poke 16 holes through the red-colored circles. The color-coding concept is a fantastic teaching tool for introducing newcomers to the SFG method. It's also a great way to involve kids in gardening. If you're totally new to gardening, don't worry because the package includes planting guides to help gardeners get started. You can also download them online.

My Thoughts on the Seeding Square

Last week, the soil finally warmed, and I was ready to start sowing cool-weather plants like spinach and bok choy. It was the perfect time to put the Seeding Square to the test.

First off, I'll say that I was incredibly impressed with the construction of the gardening accessory. It's super sturdy, and I wasn't afraid to press it firmly into the soil. I imagine it'll hold up for a long while. ***(update: 1 year later and it's still going strong!)***

Part of my garden features semi-permanent wooden grids, which is where I first began my planting with the Seeding Square. It's a bit tough to use the square atop a grid, but if my beds were completely filled, I suspect it would be easier. I still was able to poke the holes I needed and finished with planting in no time at all.

The Seeding Square really made my life easier in the no-grid

portion of my garden. A quick press into the soil and my faux-grid was complete. I expect perfect squares of seedlings to pop up any day now!

I didn’t end up using the spoon end of the wand nor did I find myself choosing to use the funnel, but they’re helpful add-ons that others may find useful. There’s also little chance of losing the wand because it magnetizes to the square.

The square itself is super easy to clean, too. A quick rinse under the tap and it looked good as new.

An Inexpensive Tool for Frugal Gardeners

I look forward to using the Seeding Square throughout the season and beyond. It’s a well thought out tool that’s built-to-last, and it works exactly as intended. I even left my first planting day of the season without dirt under my fingernails!

What I’m about to type is a bit of blasphemy in the world of SFG, but the Seeding Square has me thinking that I may not

replace my grids once they eventual

Why do I recommend this product to frugal gardeners? It's a small investment that will last you a long time. It's also a great entry tool for those interested in Square Foot Gardening. I'm a big believer that organization in the garden leads to pennies saved.

Check out the Seeding Square website for more info. The product may also be purchased on Amazon.

Disclaimer: I was graciously gifted a seeding square in exchange for an honest review.
