

The Best Plants for Mental Health Benefits

My two biggest passions in life are art and mental health. Gardening is an art form. Also, gardening has many mental health benefits. I was curious to do some research into the best plants for mental health benefits. Of course, this will vary from person to person. Nevertheless, there are some plants commonly considered beneficial in this way.

Plants and Mental Health

[Keeping plants improves mental health](#) according to numerous studies and personal anecdotes. Potential benefits include:

- Reduces stress
- Reduces loneliness
- Improves mood
- Creates routine and structure

- Improves cognitive function as well as creativity
- Enhances self-esteem
- Improves sleep

Notably, of course, this will vary from person to person. I'd argue that keeping plants can help most people's mental health but that what this looks like for each person will vary. For example, if you have severe depression, then it can be really challenging to get the motivation to water every day. Going out to your garden each day can help ease the depression. And yet, if you can't keep up with it and your plants die, that can make you feel worse. As someone who lives with recurring depression, I understand that there's a fine line. So for people like me, keeping fewer plants that require less care can be a good solution.

The Best Plants for Mental Health Benefits

The plants that people prefer are also very individual, of course. Some people feel best when growing healthy vegetables that they can eat. Others thrive with lots of very colorful flowers around. You'll know – and continue to discover – what is right for you. That said, there are some plants that are [widely considered](#) the best plants for mental health benefits. Here are some common examples:

Lavender

Lavender is known for its calming and relaxing properties. It has been shown to lower heart rate, blood pressure, and levels of the stress hormone cortisol. Lavender also has a soothing scent that can help to promote better sleep. Personally, I use lavender essential oil in my diffuser every night. I also use lavender spray on my bedding. Natural lavender growing in a garden would likely be even better.

Jasmine

Jasmine has a sweet, floral scent that has been shown to reduce anxiety and promote relaxation. Like lavender, it can also help to improve sleep quality. Moreover, it's been shown to reduce symptoms of depression. If you're looking for an all-over "feel good" plant for mental health benefits, jasmine is one good choice.

Aloe Vera

Aloe Vera is a low-maintenance plant that can help to purify the air and remove toxins. It can also help to reduce stress and promote relaxation. In fact, aloe vera has natural sedative properties that can help to reduce stress and anxiety, improve sleep, and boost mood. Therefore, this is a really great indoor plant for both physical and mental health.

Peace Lily

Just the name tells you that this plant might have mental health benefits. Similar to aloe vera, the Peace Lily is another plant that can help to purify the air and remove toxins. Moreover, the plant contains compounds that can help to promote relaxation and improve mood. It is easy to care for and can thrive in a variety of environments, making it a great choice for those looking to improve their health without taxing their energy.

Snake Plant

The Snake Plant is yet another low-maintenance plant that can help to purify the air and remove toxins. The plant releases oxygen at night, which can help to create a more restful sleep environment. Additionally, it is known for its hardiness and ability to thrive in a variety of environments, so it's a versatile option in terms of plants for mental health.

Spider Plant

Similar to the Snake Plant, the Spider Plant is a low-maintenance plant that purifies the air. While the Snake Plant is particular good at cleaning the air at night, the Spider Plant provides overall toxin clearing. A room with both of these should have nice clean air, making it easier to breathe and rest. This is always good for our mental health!

Rosemary

There are several great herbs that you can grow to promote mental health. Rosemary is a great example. The scent of rosemary has been found to stimulate the brain, which can improve cognitive function. Many mental health conditions affect concentration and memory. Rosemary can help with that! And yet, even while it boosts mood, it's also a calming plant.

Moreover, you can, of course, consume the rosemary that you grow. This has many physical and mental health benefits. Reducing inflammation and improving immune system function are two of the biggest benefits. This helps both the body and the mind.

Basil

Basil is another herb that can help to improve memory and concentration. It also has a calming effect and can help to reduce stress and promote relaxation. Moreover, it has cardiovascular benefits. Plants that support your overall health are good for your mental health. After all, mental health is health, as they say!

Sunflowers

Personally, I find it hard to be unhappy when looking at a sunflower. Of course, in the throes of depression, it's hard to recognize that beauty. Nevertheless, I've found that the

little things do help with my baseline mood. Sunflowers are mood-boosting flowers. Their bright yellow color and large size make them a joy to look at. Plus, their association with sunshine and warmth can have a positive impact on mood.

Marigolds

These are also great flowers for mental health benefits. Their vibrant colors and easy care make them a popular choice for gardeners and flower enthusiasts. The bright colors are great mood boosters. And yet since they're easy to take care of, you run less risk of low self-esteem from times when you lack the energy to provide full care.

Chamomile

This is another flower that is relatively easy to grow and care for. Chamomile is especially known for its ability to promote sleep and reduce insomnia. After all, haven't you ever been offered chamomile tea to sleep? You can make tea with the plant in your garden or just reap the mental health benefits of tending to it.
