

# 10 Steps to Learning to Garden Meditate

Gardening was never my forte. Honestly, I proudly wore the label of a “brown thumb” for most of my life. I’d often cringe at the thought of tending to plants, certain I’d unintentionally send them to an early demise. Little did I know that my journey from reluctant gardener to someone who finds solace in the garden would be a transformative experience. It’s the mindfulness/ meditation aspect that does that for me. Here are the ten steps that it took to get there.

## 1. Starting Small

My first foray into gardening was timid. I began with a single-potted plant—a resilient succulent known for its ability to withstand my neglect. It required minimal care, allowing me to build confidence slowly. It wasn’t the first

one I'd ever bought. I had killed others before. But I was ready, albeit with baby steps.

## **2. Learning Through Mistakes**

The beginning was marked by countless failures. Overwatering, underwatering, and choosing the wrong plants were all part of the learning curve. But with each mishap, I began to observe the subtleties of my plants' needs, fostering a sense of mindfulness in the process. I honestly never thought that I'd get there. My sister always tells me "Just ask the plant what it wants." I always thought she was nuts. But she's not. You observe and you attend and you are mindful and then it starts to all click.

## **3. Patience and Presence**

Gardening helped teach me the art of patience and presence. Instead of rushing through tasks, I started to slow down, observing the nuances of my plants. And when I failed to do that, they died. This repeatedly reminded me of the importance of being fully engaged in the moment. This is really what mindfulness is all about.

## **4. The Healing Power of Nature**

Amidst the frustrations and mishaps, I found solace in nature's healing embrace. The garden became my refuge, a place where I could escape the chaos of daily life and immerse myself in the serenity of the natural world. I am an urban woman. However, I love the fact that San Francisco offers so many opportunities to immerse yourself in nature within the city itself. You don't even have to have your garden. You can enjoy any of the small and large gardens throughout the city as spots for meditation.

## **5. Nurturing Growth, Both Plant and Self**

As my gardening skills improved, I noticed a parallel growth within myself. Tending to plants became a metaphor for self-care and nurturing personal growth. I found that the more I nurtured my garden, the more I nurtured my well-being. The more I nurtured myself, the easier it was to remember to nurture the plants. It helps to feel more tied into nature.

## **6. Accepting Imperfection**

Gardening taught me to embrace imperfection. Not every plant thrived, and not every leaf remained unblemished. Just as I accepted my plants' flaws, I learned to accept my imperfections with greater compassion. This is something I've worked in throughout my life, particularly through therapy. There are many ways of approaching it. The point is that gardening teaches us things like this in a somatic, experiential way that differs from just thinking about it.

## **7. Mindful Observations**

In the garden, I developed the practice of mindful observation. I'd spend moments simply gazing at the play of sunlight on leaves, the dance of pollinators, or the delicate unfurling of a bud. These contemplative moments allowed me to connect with the beauty of the present. They reminded me that everything that's happening in my head is related to the past or the future. What's happening right now in front of me is what's real. The rest is usually just noise. By teaching myself to focus on just one thing in a garden, I learned mindfulness. And that leads to learning meditation.

## **8. Letting Go of Control**

Gardening reminded me that life, like the garden, is filled with uncontrollable variables. I couldn't command the rain to fall or the sun to shine. I couldn't always shield my plants from pests or disease. Even when it seemed like I was doing everything right, plants would fail to thrive. It was hard. I wanted to fix it.

However, in relinquishing the illusion of control, I discovered a profound sense of freedom. It was a reminder that there is beauty in the natural ebb and flow of existence. Sometimes, the most vibrant blooms emerge from the unexpected and unplanned corners of life.

Gardening became a symbol of embracing impermanence. It offers an ongoing lesson in letting go that extends far beyond the garden's borders into my life. I still struggle with wanting to control everything but it reminds me again and again that it is okay that I cannot.

## **9. Celebration of Growth**

Each tiny sprout, every new leaf, and the first bloom are all reasons for celebration. Witnessing the gradual transformation of my garden taught me to savor the journey and appreciate the beauty of growth. As with all of the other lessons, this was less about the garden than it was about myself. I exist in cycles and seasons but am also always growing. It's a powerful thing and it's nice to see it outside of yourself then to see how it relates to the inside of yourself.

## **10. Gardening as a Meditation Practice**

Surprisingly, I found that gardening was my form of meditation

or mindfulness. The act of tending to plants, gazing upon the deep colors of flowers, and immersing myself in nature's rhythms all became a profound mindfulness practice. I didn't know that this would happen although looking back it seems inevitable. By learning not to worry about "doing it right" and just being present in the act of doing it, I was able to allow things to grow. And in the process, I grew, too.

# Garden Photo Walks for Mindfulness

Much of the time, looking at life through our phones takes us out of the present moment. However, I find that I can use the phone's camera to practice mindfulness. Garden photo walks are my favorite way of practicing this on a regular basis.

## What Is Mindfulness?

All that I mean by [mindfulness](#) is the experience of being present in the moment. It's about being with myself, without external noise from something like music or podcasts. It's about noticing what arises within me and around me. Moreover, mindfulness is an awareness that whatever is happening is perfectly okay. I don't need to judge it or change it.

## What Are Garden Photo Walks?

There are three obvious components to a garden photo walk:

- A garden. It can be any size. Obviously, I love exploring huge public gardens such as the San Francisco Botanical Garden or our local Japanese Tea Gardens.

However, backyard gardens are suitable for garden photo walks as well.

- Photos. For me, it's all about using the lens of the camera to direct my attention to different aspects of the garden. I move between landscapes and close-ups. I try to take photos not in order to share them or even save them but in order to see differently.
- Walking. However, this component can be very minimal. In a large garden, the meandering is a form of walking mindfulness. In a small garden, it's more about the micro-movements. The point is that I'm embodied, rather than in my head.

## **How The Camera Enhances The Garden Walk**

Some people are fully capable of becoming present with the moment simply by sitting in their garden. Others experience it through the act of gardening itself. However, I tend to spend a lot of time in my head. I think the combination of walking while intentionally looking for photo opportunities gives me just the right amount of activity that I'm able to fully get into the moment.

Don't get me wrong; my monkey mind still drifts, of course. I'll find myself thinking about sharing a certain photo. I'll see an unusual plant and think about texting my sister to ask what it is (because she and my mom are far more likely to know than I am.) As with any meditation practice, the mind drifts. But I keep refocusing, literally, through the lens of the camera. It reminds me to see what is in front of me.

## **Walking The Same Garden Through The**

# Seasons

Obviously, it's always very engaging to walk in a brand new garden. I visit gardens often on my travels for that very reason. However, there's also something special about walking through the same garden again and again.

I've done photo experiments while I take a photo from the same point of the same plant every day for weeks. Each time, I'm presented with the opportunity to see it anew. This teaches me so much. It reminds me that we can choose to see our lives freshly each and every day. It reminds me that some days a plant may seem like it's wilting only to brighten up the next day in the sun.

Gardens are fleeting and also permanent in their cyclical growth. So are we. Photo garden walks teach me as much about people as they do about plants.
